LRD-0635 Collimated Diode Laser System

Series Specifications:

Nominal Wavelength	635 nm
Output Type	CW
Laser Source Type	Diode

Overview:

The LRD-0635 Series of Collimated Diode (Semiconductor) Lasers are ideal for applications requiring a wavelength of 635 nm and a wide range of output power levels from 5 mW to 5 W with a high level of long-term output power stability and long operating lifetime at an aggressively competitive cost.

These lasers are commonly used for various scientific applications involving biological research, as well as PIV, spectral analysis, laser display (entertainment) and a broad spectrum of other applications. The driver is available as a complete FDA-compliant system or as an O.E.M. component with significantly reduced dimensions.

Available with TTL and analog modulation as well as a wide array of output power and stability levels, Laserglow products are currently being used by some of the world's top universities and other prominent research facilities.
