LRD-0785 Collimated Diode Laser System

Series Specifications:

Nominal Wavelength	785 nm
Output Type	CW
Laser Source Type	Diode

Overview:

The LRD-0785 Series of Collimated Diode (Semiconductor) Lasers are ideal for applications requiring a wavelength around 785 nm and a wide range of output power levels of 10 mW to 2500 mW with a high level of long-term output power stability and long operating lifetime at an aggressively competitive cost.

These lasers are commonly used for communications research as well as scientific applications involving spectral analysis, biology research, and a broad spectrum of other applications. The driver is available as a complete FDA-compliant system or as an O.E.M. component with significantly reduced dimensions.

Available with onboard and remote on/off control as well as a wide array of output power and stability levels, Laserglow products are currently being used by some of the World's top universities and other prominent research facilities.
