Series Specifications:

Nominal Wavelength	1550 nm
Output Type	CW
Laser Source Type	Diode

Overview:

The LID-1550 Series of Enhanced Profile Collimated Diode (Semiconductor) Lasers are ideal for applications requiring both a wavelength in the IR range and a good beam profile typically unavailable in a diode laser. This series is available in a range of output power levels of 50 mW to 200 mW with a high level of long-term output power stability and long operating lifetime at an aggressively competitive cost.

These lasers are commonly used for various scientific applications involving biological research as well as PIV, spectral analysis, and a broad spectrum of other applications. The driver is available as a complete FDA-compliant system or as an O.E.M. component with significantly reduced dimensions.

Available with TTL and analog modulation as well as a wide array of output power and stability levels, Laserglow products are currently being used by some of the World's top universities and other prominent research facilities.

Key Features:

- Round, homogeneous, flat-top transverse beam profile
- Air cooled - no need for water cooling or external chiller
- Lightweight, compact design
